Deep Restore

Architecture Comparision Server

September 6, 2018

Description

- Densenet, Early, Late and Bottleneck use patches of size 128x128 + mirror padding (padding size depending on architecture)
- All testes architectures use the information of previous, current and next frame
- 1000 iterations
- augmented training set
- last activation function: sigmoid
- train and test data visualized for early stopping
- accuracy and loss for each architecture and early stopping
- dropout with 0.85 keep probability
- L2 regularization of weights (weight decay)
- batch normalization
